

Palm Bark From

The palm bark we office is the same as is used on our natural bark trunks which are installed in some of the world's most prestigious hotels, resorts and homes. An example is shown below.

Our palm bark is not the cheaper variety of coconut fiber often advertised which is more a fabric in feel. Our palm bark is actual wood with fiber.

Harvested from our Farm with Washingtonia Robusta Palms (also called the Mexican Fan Palms) without harm to the live trees, our palm bark includes the wood bark plus the natural palm fibers. These natural palm fibers are often used to camouflage the frond head assembly and as filler in between bark segments jus as the natural tree trunk on live trees appears.

Color varies of course with each piece since the product is natural yet in general the color is a warm palm brown with slight red/beige overtones as the photo above shows. We ship mixed sizes – ranging from 9 – 14 inches in breadth – since your palm project will require both larger segments for the base of the trunk and the smaller segments for the top of your trunk. Note the image above shows the trimmed version we use to build our tree trunks. We ship untrimmed so that you may trim your bark to suit your design needs.

We offer untreated palm bark and for those building for commercial institutions, a fire retarded palm bark. When ordering, discounts are based on quantity ordered. See chart below. Shipping/freight additional. Prior to processing your order we will confirm thee freight costs to you. Please specify your delivery sate required for you project. Prices listed are in U.S. dollars. Minimum purchase is 100 pieces as indicated below. Bundled in lots of 20 pieces. Call for pricing on quantities grater than 50,000 pieces.
